

**IDER CSFWG Sub-Topic 2a. Additional Services:
(From Wednesday, July 6, 2016 Notes)**

Additional Services:

The table below was discussed and the following outcomes were identified:

- Grid visibility and situational intelligence was suggested to be split into minimum/mandatory data requirements (yet to be defined) and data above and beyond the required amount. There seemed to be agreement that the second item (above and beyond) could be considered another potential service.
- Reactive power support was suggested to be combined with the voltage service previously identified. The group was asked to review the effort of the services sub-group and see if this adequately captures it.
 - o If members of this sub-group are interested in attending the next services discussion (8 am tomorrow 7/7), please contact Diana Genasci.
- Societal benefits was included in the valuation component table and a number of potential sources for more details was identified.
- No agreement was reached on the remaining 3 items, but action items were identified:
 - o CVR- SolarCity to develop a more detailed description and potential recommendation
 - o Equipment life extension- Sahn White to develop a more detailed description and potential recommendation
 - o Market price suppression- SolarCity to develop a more detailed description and potential recommendation (I did not capture who would do this, but am defaulting to SolarCity. If others want to volunteer, please let us know).

The more developed descriptions and recommendations should be shared, at the latest, with this sub-group (i.e. this email distribution) by COB 7/8, with comments due back by noon on 7/11.
